AI governance in practice

THE FIVE PIECES

- **CODIFY · CenterStart** Turn an expert's judgment into policy an AI can follow.
- **CONTEXT · CenterEye** Each AI a person uses gets the same context: the company's and their own.
- **SCOPE · CenterSquare** Company policies flow down to the groups and people they apply to.
- **CONDUIT · CenterLoop** Carries work and messages between people, agents and outside systems.
- **GOVERN · CenterGovern** Every step is enforced, traced, auditable and accountable. The intent behind each decision is kept as it changes.

EVERY GATE

Each handoff between people, agents, teams or companies passes through a policy gate.

The gate reads the intent: who, what, why, on whose authority, until when.

It enforces the policies in scope and records the decision with its reason.

- **PASS:** goes ahead on its own.
- **BLOCKED:** stops here.
- **NEEDS APPROVAL:** a person in the loop decides.
- **FEEDS BACK:** a repeated exception goes back to the experts.

GATE SIZE · PATH · SCOPE LINES

- Small: a routine, low-risk pass inside Company A.
- Medium: a riskier handoff. Work goes to an agent, crosses Company A's edge or goes back to the experts.
- Large: a person in the loop decides or the work is blocked.
- The intent's path.
- Violet is Scope. Each violet line is the policy boundary of a company or a group.
